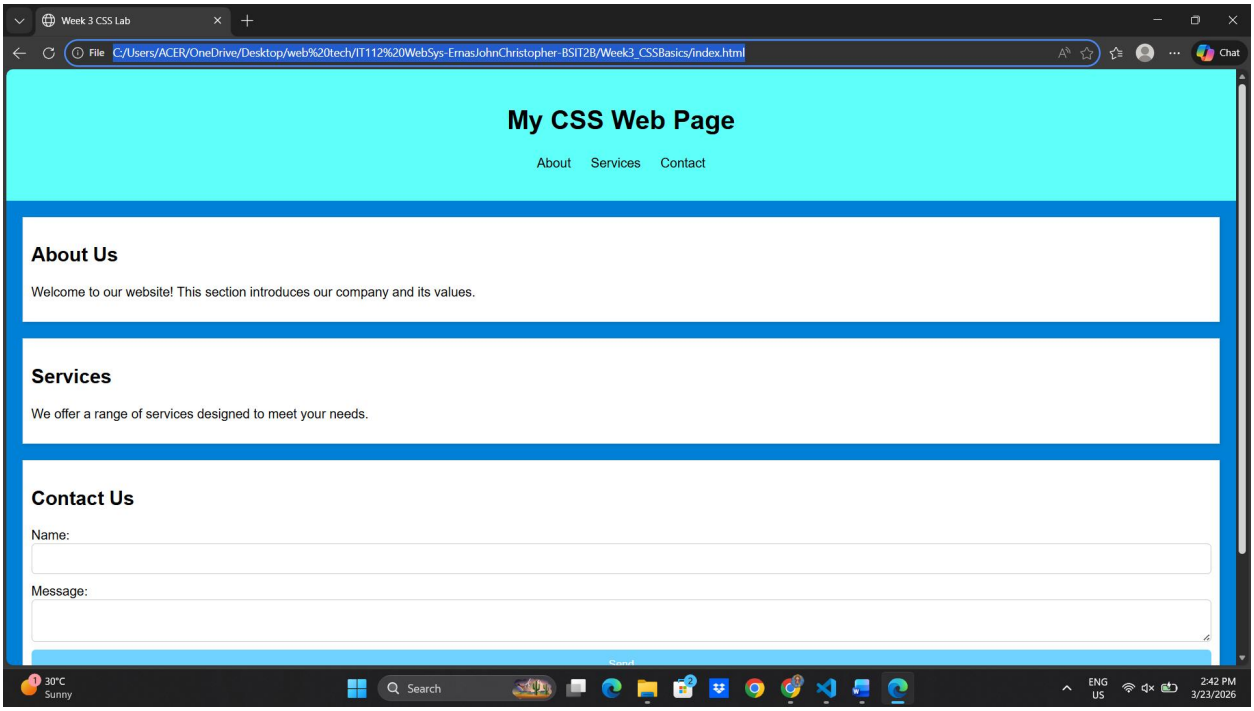
Reflection Paper

Week3



On my Week 3 Lab , I learned how to create and link an external CSS file and apply different styles to my webpage. I also learned about CSS selectors, the box model, hover effects, and media queries for responsive design. This lab was a bit difficult because there were many new concepts to understand. Sometimes my design didn't look right, especially when dealing with spacing and layout. To fix this, I followed the lab guide and reviewed my code step by step until I got the correct output. I also experimented with different styles to improve my design. One improvement I made was making my layout more organized and responsive on different screen sizes. Overall, even though it was challenging, I learned a lot from this activity.
